

Digital Twins: C++ and Smalltalk

Aik-Siong Koh

2022-09-23 Fri

Motivation

- How to understand complex software better?
- Combine best of static and dynamic languages
 - C++ for speed, Smalltalk for flexibility
- Use redundancy to reduce bugs by orders of magnitude

Digital Twin Concept (2002)

The Digital Twin

Engineering

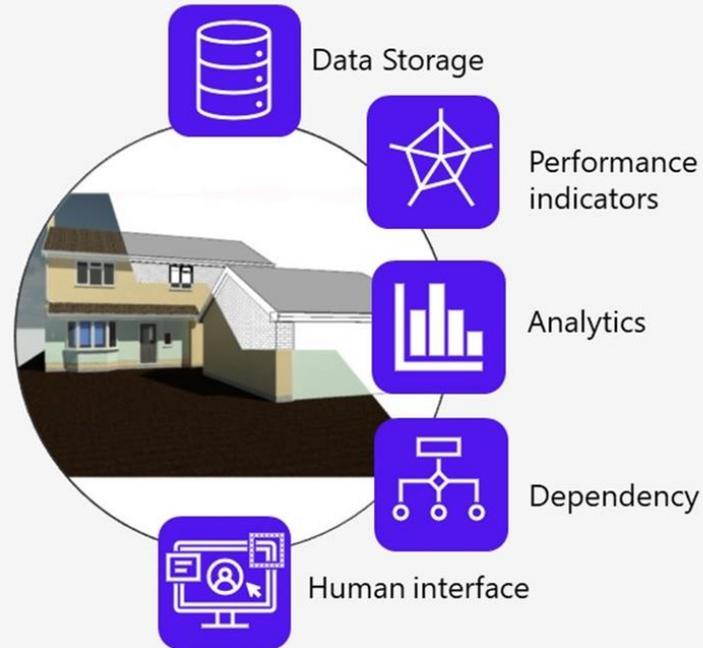

- Drawings
- Specification
- BIM Model

Operations

- IoT Feeds
- Sensors
- Smart Appliances
- Maintenance
- Occupation
- Energy

Information

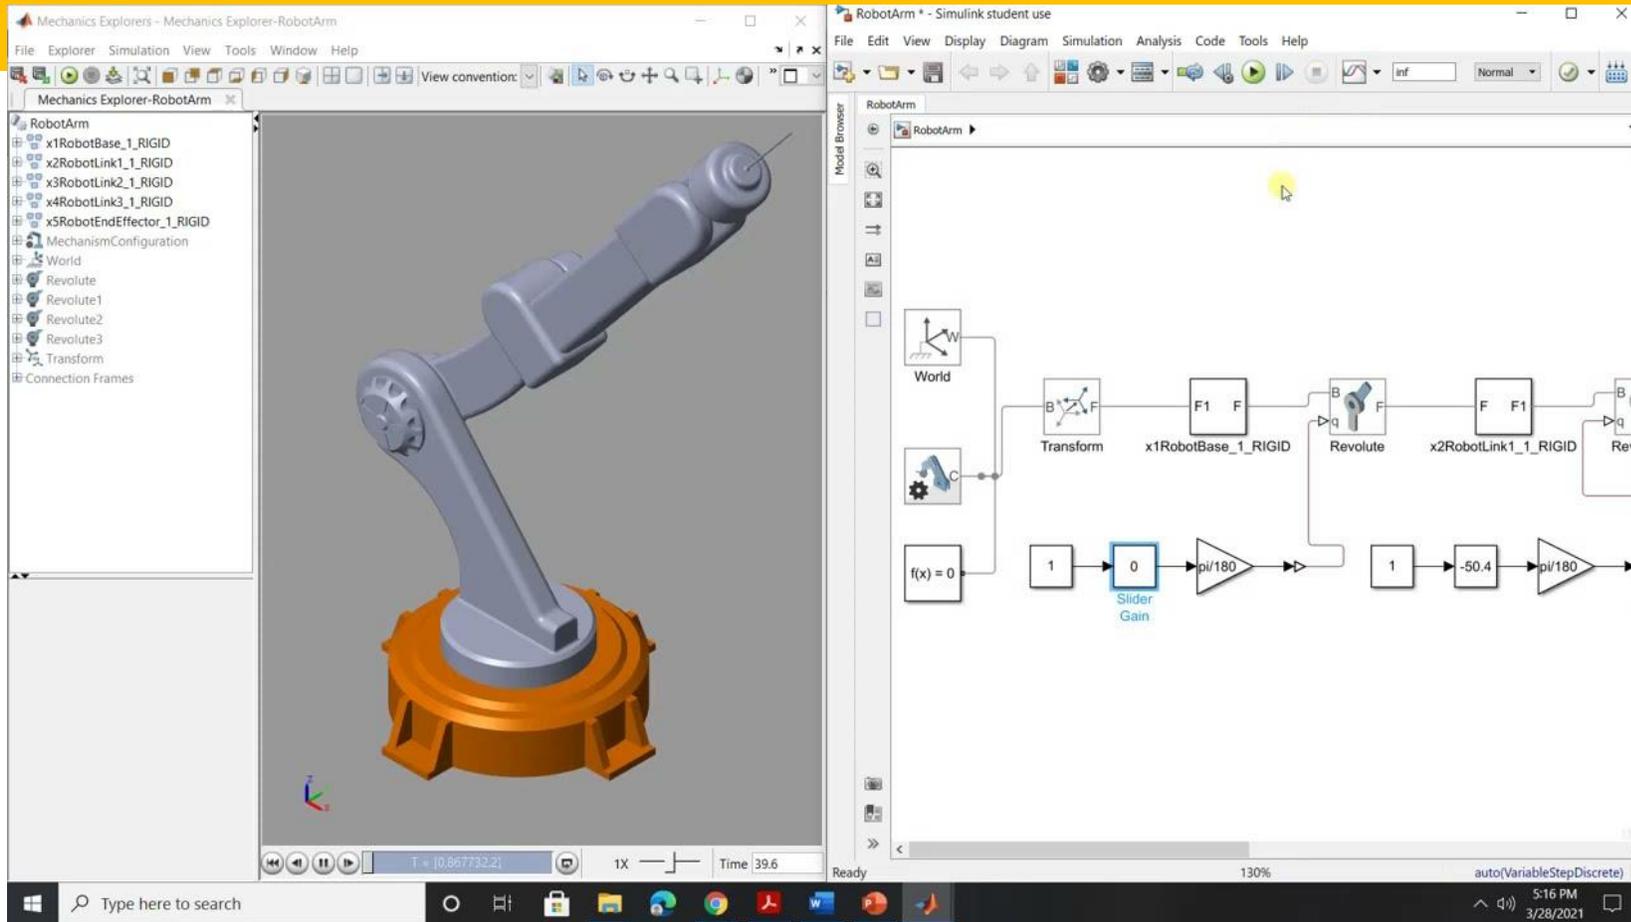

- Asset Locations
- Asset Details
- Product Details
- Maintenance Regimes
- Inspections

Difficult

Easy

Digital Twin Concept

Rigid

Flexible

Digital Twins: C++ and Smalltalk

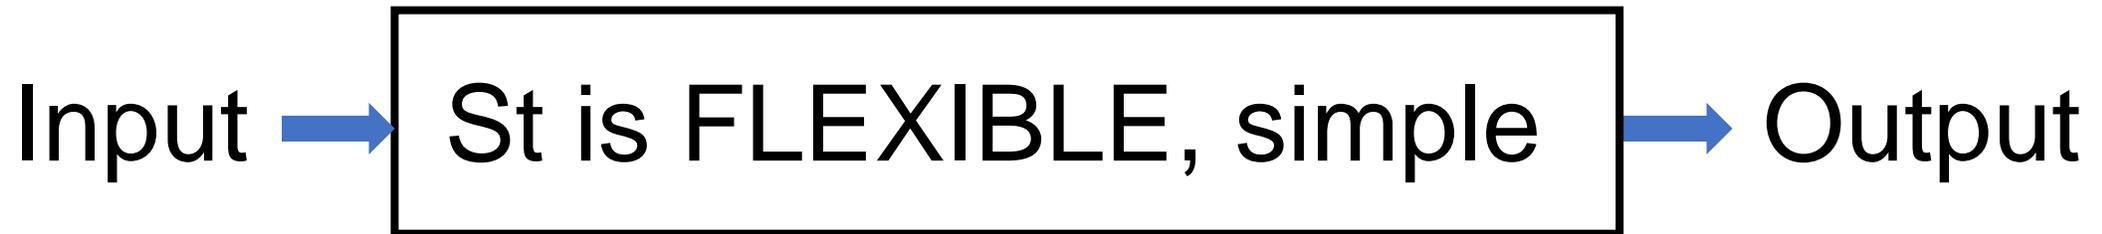

Program can be any size or any component

Why Digital Twins

C++ is best of FAST

Smalltalk is best of FLEXIBLE

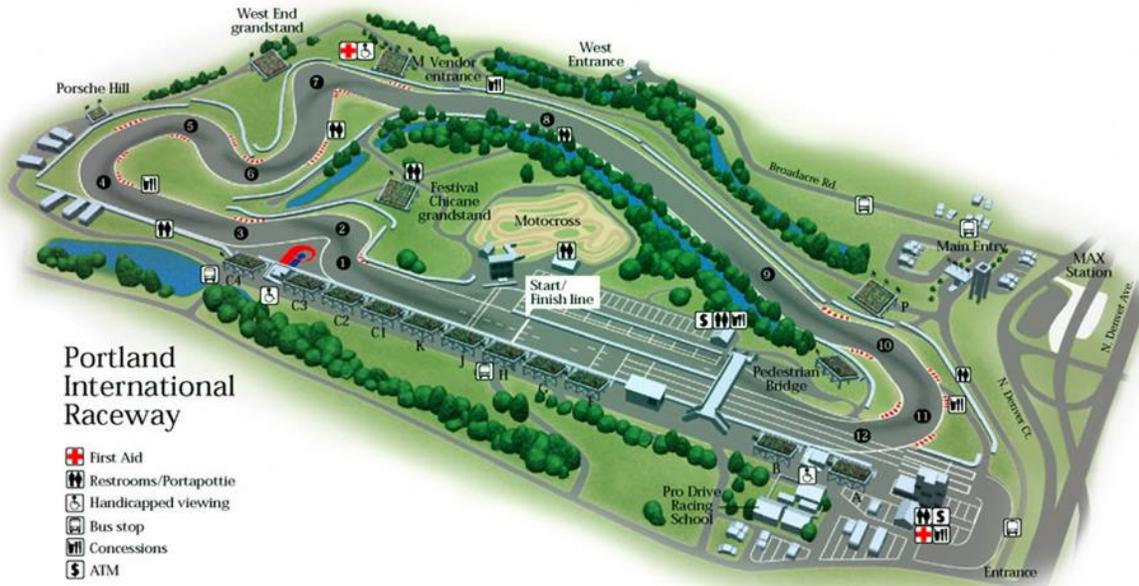

C++ is FAST at all cost

Smalltalk is NIMBLE and rugged
Low cost

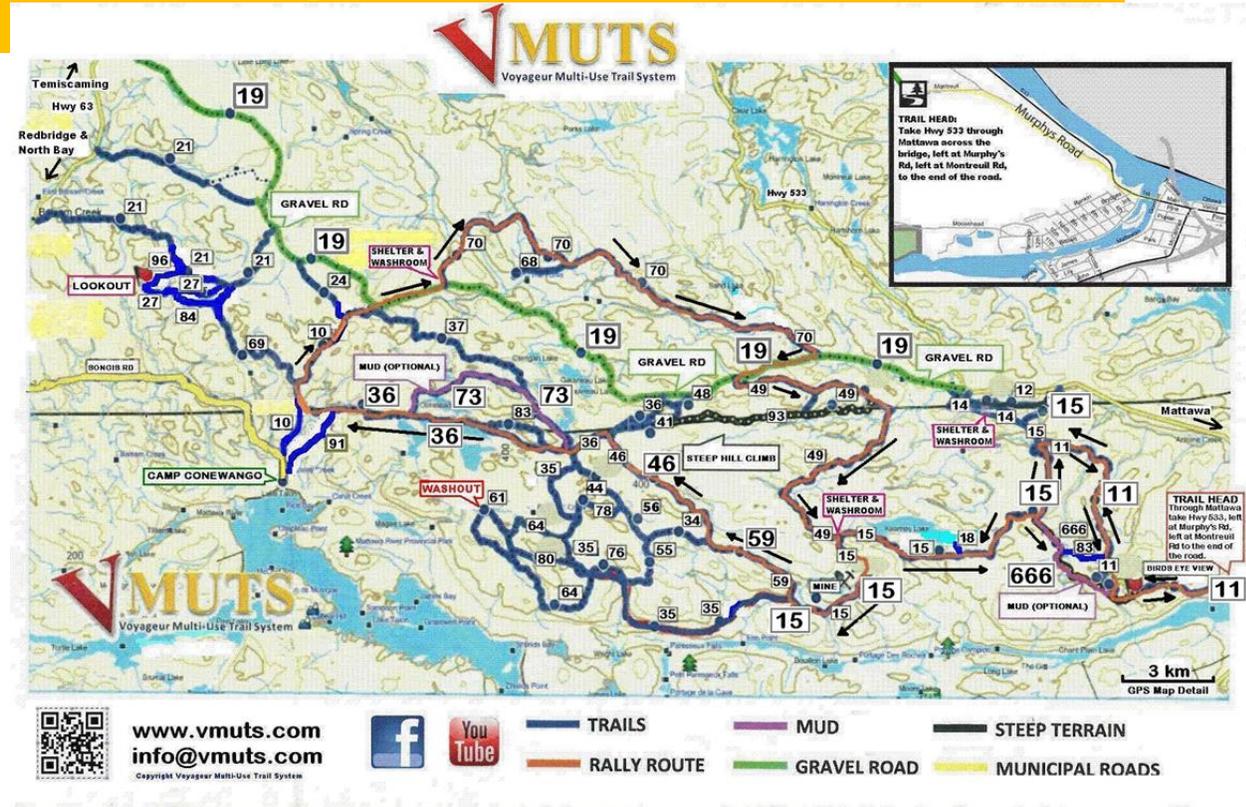

A hybrid vehicle would have compromised capabilities
Java, C#, Obj C

C++ Heavy Infrastructure
Small area

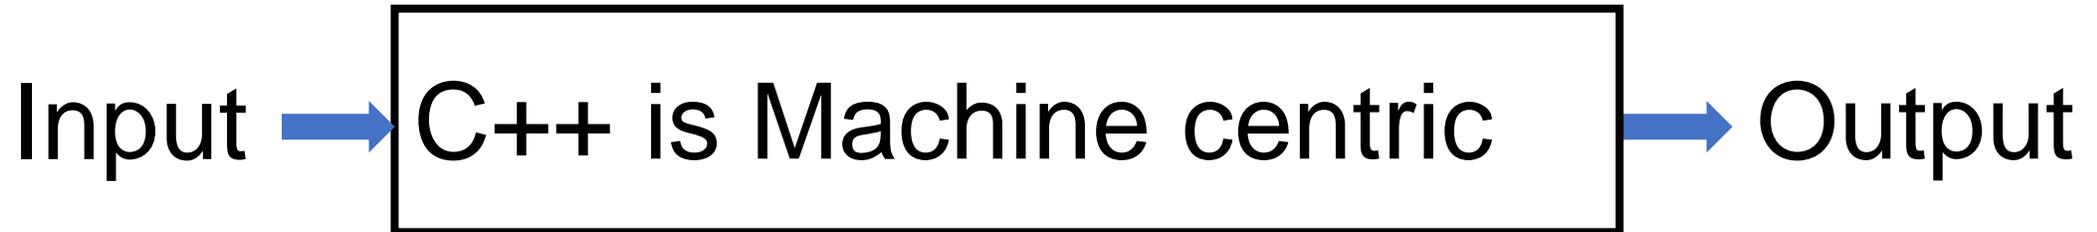

Execution

Smalltalk Light Infrastructure
Large area

Exploration

Why Digital Twins 2

Humans think Objects

“Development at the speed of thought”

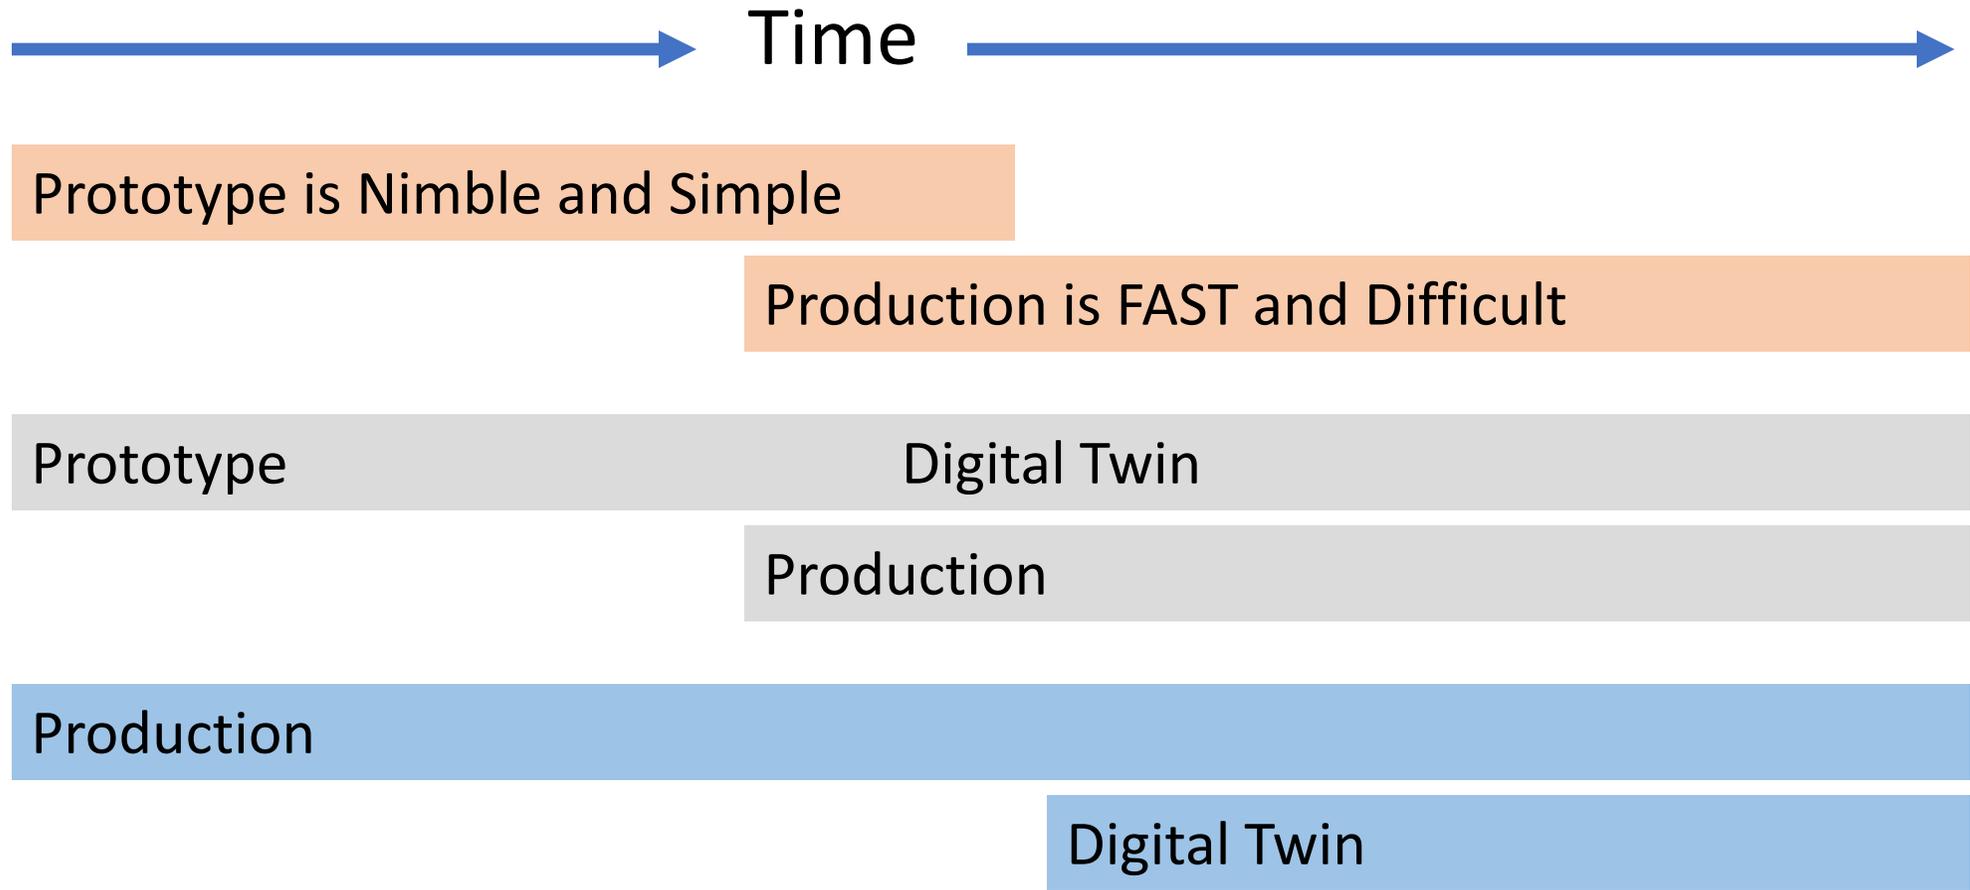

Why Digital Twins 3

- Twin can help documentation
- Twin could be substitute for documentation
 - Smalltalk is readable and less verbose than English
- **Twins reduce bugs by checking each other**
 - Probability of both making the same bug is **product** of Probabilities of each

Strategy for Twins

- Capture C++ algorithms in Smalltalk twin
 - Executable documentation
- Experiment in Smalltalk twin (superset)
 - Fearless programming
- Transfer discoveries to C++ twin
 - Manually, automated or both
 - Strict testing
 - Iterate with twin
- Debug in Smalltalk twin
- Transfer fixes to C++ twin

Prototype vs Digital Twin vs Production

Why Smalltalk

- **Everything is an object all the time**
 - Including IDE, Compiler, Debugger, Scheduler
 - Even when saved to disk on exit
- **All operations are through message passing**
 - Everything in Smalltalk is written in Smalltalk
 - Including Virtual Machine
 - Critical Smalltalk code are translated to C to be called
 - VM code is translated to C and compiled to executable

Why Smalltalk

- Everything is an object all the time
 - Pure OOP
 - 1, 1.0e2, \$a, #b, 'Hello'
 - true, false, nil, self, super, thisContext
 - Class, Block (lambda), Compiler, Debugger, etc
 - On exit, all objects are saved to disk
 - On startup, IDE returns to exact state before exit
 - Automatic garbage collection

Why Smalltalk

- All operations are through message passing
 - Object message (like Subject predicate)
 - array isEmpty.
 - 4 + 3.
 - Transcript show: 'Hello World'.
 - array do: [:each | each initialize. each run].

Why Smalltalk

- Smalltalk pioneered Pure OOP
- Influenced Objective-C, Java, Python, Ruby
- Pioneered MVC, GUI
- Xerox invented it for DARPA
- Xerox killed it
 - They wanted to sell printers and copiers
- It is free to be owned

Entire Syntax fits on a postcard

Pharo

```
exampleWithNumber: x

<syntaxOn: #postcard>
"A "complete" Pharo syntax"
| y |
true & false not & (nil isNil)
  iffFalse: [ self perform: #add: with: x ].
y := thisContext stack size + super size.
byteArray := #[2 2r100 8r20 16rFF].
{ -42 . #($a #a #'I'm' 'a' 1.0 1.23e2 3.14s2 1) }
do: [ :each |
  | var |
  var := Transcript
  show: each class name;
  show: each printString ].
^ x < y
```

PLACE STAMP HERE

<https://www.pharo.org>

Smalltalk is Best of Flexible

- Edit and run anywhere
 - Zero build time
- Edit and continue in Debugger
- Inspect any object anytime
- Arbitrary levels of inspecting and debugging
- Save all objects and restart where you left off

Digital Twins: C++ and Smalltalk

Great Complement
Checks and Balances

Hybrid program would be a mediocre compromise

Smalltalk VM is written in Smalltalk and Translated to C

- Slang is subset of Smalltalk
- Slang mimics C
- VM is written in Slang in Smalltalk IDE
- VM is simulated in Smalltalk IDE to run another Smalltalk image
- Full debugging power of Smalltalk used on VM code
- VM Slang code is then translated to C code
- VM C code is compiled to make runtime executable VM

Slang to C translation

Slang (subset of Smalltalk)	C
instanceVariableNames: 'foregroundColor backgroundColor'	sqlInt foregroundColor, backgroundColor;
classVariableNames: 'MemorySize'	#define MemorySize 10
^a+b	return (a+b);
a bitShift: 4	a >> 4;
now := FooBar foo: x bar: y	now = foobar(x,y);
^self bigEndian ifTrue: [16r6502] ifFalse: [16r0265]	return bigEndian() ? 0x6502 : 0x0265;
1 to: 10 by: 2 do: [:i a at: 1 put: (i*2)]	for(i=1; i = 10; i += 2) { a[i] := (i*2); }
flag whileTrue: [self check]	while (flag) { check(); }
getName <returnTypeC: 'char *'> newStr <var: #newStr type: 'char*'> newStr := 'hello' ^newStr	char *getName(void) { char*newStr = "hello"; return newStr; }

Slang to C translation

Slang	C
<pre>defaultWidth <inline: true> ^10 width <inline: false> ^width ifNil: [width := defaultWidth].</pre>	<pre>static sqlInt width(void) { return width == nilObj ? (width = 10) : width; }</pre>

<https://wiki.squeak.org/squeak/2267>

Smalltalk VM written in JavaScript

- <https://caffeine.js.org/beatshifting/>
- <https://pharojs.org/demo.html>

Digital Twins Conclusion

- C++ for speed, strict safety
 - Industry is good at it
- Smalltalk for flexibility, experimentation, fun
 - “Development at the speed of thought”
- Twins reduce bugs by checking each other
- Smalltalk was invented right
- Anyone can “own” Smalltalk for free
